PROJECT GEOGRAPHY

Challenges EPC Firms Face in **Solar Projects**

Building large-scale solar plants across Europe demands **reliable, compliant, and technically skilled subcontractors** — yet most EPC firms struggle to find partners who can deliver without friction.

"Projects stall not because of technology — but because of talent gaps, compliance failures, and slow mobilisation."

With increasing EU renewable energy targets and rapid project deployment timelines, the gap between demand and dependable execution has never been wider.

Slow Mobilisation

Subcontractors take weeks to assemble teams, causing costly project delays from the very first day.

Compliance Gaps

Incomplete documents, HSE records and certifications risk project shutdowns and heavy fines.

Skilled Labour Shortage

Qualified solar engineers and site foremen are increasingly scarce and hard to source across European markets.

Cross-Border Complexity

Work permits, visa processing and multi-country regulations add heavy bureaucratic burden to every project.

The **Volenex** Approach

Volenex delivers a **single-source subcontracting solution** that eliminates the coordination chaos of large solar projects. From the first site survey to commissioning — we own the full execution.

End-to-End Execution

Site preparation through commissioning — the complete lifecycle under one contract.

Ready Technical Teams

Pre-qualified engineers, technicians and technicians — deployable across Europe with zero delay.

Full Compliance Guaranteed

EU directive HSE certificates, ANRE standards and work permits managed entirely in-house.

OUR DELIVERY PROCESS

01

Scope & Mobilisation

Team assembly and site readiness completed within days of contract signing.

02

Civil & Structural Works

Foundation, superstructure and fencing — built to spec and on schedule.

03

Electrical Installation

Panel mounting, cabling, inverter connections and grid infrastructure.

04

Commissioning & Handover

Full system tests, compliant transparent documentation tracking and presentation.

End-to-End **EPC** Contracting Solutions

From site preparation to commissioning —
complete EPC contracting, delivered.

EPC Contracting

TURNKEY INSTALLATION

- Complete site works from groundbreaking to commissioning
- Managed as a single work package — one accountability point
- Compatible with all EPC processes and workflows

Infrastructure / Superstructure

INFRASTRUCTURE WORKS

- Infrastructure and construction works
- Fencing, road access, drainage and site utilities
- Built to EU structural and safety standards

Technical Personnel Supply

RIGHT PERSONNEL, FAST MOBILISATION

- Qualified solar engineers, electricians and technicians
- Visa, work permit and residence permit managed in-house
- Field-ready teams deployed within days

Project Management

DELIVERY FROM DAY ONE

- Dedicated PM assigned from mobilisation through handover
- Regular reporting and transparent communication
- Integrated HSE management on every site

Why Leading EPC Firms Choose **Volenex**

Six reasons we are the preferred subcontractor
across Europe.

01

Focused Expertise

Deep experience in solar, electrical infrastructure and the energy sector. We can manage the entire process from plant to grid.

02

Proven Subcontractor Partnership

We supplied personnel and technical support to major EPC firms for years — we know the sector dynamics from both sides.

03

EU & ANRE Compliance

Full compliance with Romanian and EU standards (CE, ANRE). All HSE certificates are complete, auditable and kept continuously up to date.

04

Fast Mobilisation

Our ready technical team infrastructure means zero delays at project start. We manage visa and work permit processes A to Z in-house.

05

Based in Romania

Our local company structure provides advantages in legal processes, coordination and logistics. Fast mobilisation across EU, Balkan countries and Turkic Republics.

06

Transparent Communication & Reporting

Regular progress reports and open communication at every stage of the project. Shared goals, full visibility.

Flexible Collaboration Models

We adapt to your project's needs — choose the best fit or combine models.

01

Subcontracting (Sub-Contractor)

We take defined work packages from the main EPC contractor, execute them with our field team, and deliver on time.

- ✓ Direct site management with our teams
- ✓ Direct field execution with our crews
- ✓ Milestone-based delivery and reporting

02

Technical Personnel Supply

We source and supply qualified engineers, technicians and workers tailored to your project needs, and coordinate them on-site.

- ✓ Pre-selected, field-ready personnel
- ✓ We manage all visa and residence processes
- ✓ On-site coordination and HSE monitoring included

MOST POPULAR

03

Project-Based EPC Support

Complete project support covering engineering, procurement assistance and site execution — tailored to specific project requirements.

- ✓ Engineering and technical advisory
- ✓ Procurement assistance and logistics coordination
- ✓ Full site execution capability
